

Boosting joint impact of projects by Enhancing Synergy and Alignment through Innovative Technology

December 16th, 2019

Impact is rarely achieved by a single project. In most cases, it involves many projects, funded and executed by different agencies. Using innovative technology to map the intervention logic and to keep track of the interwovenness is crucial to create synergy and alignment. The same technology also helps organizations to choose the best location to execute projects and to optimize the exchange of lessons learned. Dr. Ir. Niek Duivenbooden, Director of Trimpact will showcase the results of using this innovative approach in various counties (Burundi, Fiji, and Mali). Information collection, storage and reporting at various levels is the next step to provide stakeholders the required insights to make their decisions.

Date & time	December 16 th , 2019: 10.00 am (9.30am registration)
Venue	Integrated International, G Floor, Building No. 38, Suleiman Al Hadidi Street, Amman, Jordan
